

Review: *Injecting Aluminium*, E3M, France, 2017

Runtime (min): 90

The Sleeping Killer

This is an excellent documentary shining a light on the untested safety of aluminium in industry since its first use back in 1889.

Testimony of professors interviewed and their scientific evidence are an indictment of French and World Health Organisation authorities charged with ensuring public safety. A major concern is the use of aluminium in vaccines and possible cause of the debilitating macrophagic myofasciitis (MMF), also that vaccine adjuvants require no approvals.

The aluminium adjuvant absorption study relied on by the vaccine industry was in 1997 by Richard Flarend, Stanley Hem et al. (PII: S0264-410X(97)00041-8) and is disturbing:

-Only two rabbits received intramuscular injections of a radioactive Al isotope-containing adjuvant.

-After 28 days, only 6% of Al had been excreted in the rabbits' urine.

(Muscle injection sites were not examined for Al and rabbit femur bones were lost and destroyed (Al accumulates in bones.)

MMF correlates with the presence of Al following Hepatitis B and human papillomavirus vaccinations, and multiple sclerosis and Al salt exposure also share a positive correlation (over the long term).

The incestuous industry relations exposed are also worrying (food, cosmetics, and vaccines).

-The aluminium adjuvant absorption study relied on by the vaccine industry was in 1997 by Richard Flarend, Stanley Hem et al. (PII: S0264-410X(97)00041-8):

*Two rabbits received intramuscular injections of a radioactive Al isotope.

*After 28 days, only 6% of Al had been excreted in the rabbits' urine.

-The debilitating muscle disease macrophagic myofasciitis (MMF), identified 1993, correlates with Al presence following Hepatitis B and human papillomavirus vaccinations.

-Multiple sclerosis and Al salt exposure have a positive correlation over the long term.

-Vaccine adjuvants require nil approval.

-Ca₃(P₀₄)₂ adjuvants replaced Al ones for a time in France (up to the 1980s, in DPT and polio vaccines by the Pasteur Institute) but were more expensive than Al and rejected.

-Al destroys ovary eggs and HPV-vaccine injuries include infertility.
