

Review: *Unlocking the Mystery of Life-Origins*, Illustra Media, 2016

Minutes: 46

Death of Scientific Materialism

This documentary exposes the bankrupt foundation of biological evolution, which is abiogenesis.

Much like Richard Goldschmidt's 'hopeful monster', atheists grasp at many hopeless ideas such as self-assembling amino acid chains into functional proteins, repeating crystal structures, and the RNA-world hypothesis.

With amazing animations and scientific commentary each of the main materialistic ideas about origins is demolished.

Since their quasi-scientific ideas have failed, evolutionists have now moved into the fantasy realm of panspermia (directed and undirected) and the Multiverse, and are aptly described by Romans 1.22, AV:

“Professing themselves to be wise, they became fools.”

The Miller-Urey experiment did not account for the correct atmospheric conditions like CO₂ concentrations, and only produced a brown tar-like substance with four identifiable amino acids.

One amino acid requires twenty amino acids to fold correctly in a chain.

The idea of crystals forming life is to misunderstand what information is. A mere atomic structure repeated is like a book with the same word typed *ad infinitum*.

RNA is an extremely delicate molecule and so would never have survived the time needed to probabilistically self replicate.

Panspermian ideas and the Multiverse are a move into the realm of science fiction and a tacit admission of the bankruptcy of scientific materialism.
