

**Review: *March of the Penguins II*, Hulu, 2018**

Runtime (min): 70

**Marvellous Sea Creations**

Once again, these incredible creatures move the viewer by contrast of cruel ice and tender behaviours.

The cinematography, slow-motion scenes, and tracking of the same male emperor's reproductive season combine to create something special and educational.

Unfortunately, all the credit for the Emperor Penguins amazing design, intelligence, spatial awareness, and fortitude is attributed merely to "hundreds of thousands of years", "instinct", and "evolution". It is clear that without all their complex survival mechanisms in place from the first pair of proto-Emperors, none would have survived even a single generation to continue 'evolving'.

All praise should instead be directed towards their Maker, the Lord Jesus Christ:

**"And swear by him that liveth for ever and ever, who created heaven, and the things that therein are, and the earth, and the things that therein are, and the sea, and the things which are therein, that there should be time no longer:"**

Revelation 10.6, Authorized Version

\*\*\*

Only 50% of chicks reach adolescence, and just 10% adulthood.

About 600,000 Emperors live in Antarctica spread across 50 colonies.

By 'instinct', the penguins can chart new pathways from the breeding site to the ocean, amidst changed topography.

Satellite suburbs form as populations increase, eventually breaking off into new colonies.

The new young spend three years in the ocean before returning to their birthplace to raise the next generation.
